

CyberOptics to Debut New High-Speed, Superior Accuracy 3D AOI System at IPC APEX EXPO

MINNEAPOLIS – January 20, 2015 – CyberOptics Corporation (Nasdaq: CYBE) announces that it will launch the new SQ3000™ 3D AOI system in Booth #3332 at the IPC APEX EXPO, scheduled to take place Feb. 24-26, 2015 at the San Diego Convention Center in California. Alongside the new SQ3000™ 3D AOI, the booth will also feature CX150i automated conformal coating inspection system and SE600 premier 3D SPI system.

The SQ3000™ 3D Automated Optical Inspection (AOI) system maximizes ROI and line utilization with multi-view 3D sensors that enable fastest 3D inspection in the industry. SQ3000™ incorporates Multi-Reflection Suppression technology (MRS) and highly sophisticated 3D algorithms offering microscopic image quality at production speeds. An easy-to-use, intuitive interface with touch control facilitates minimal training and operator interaction.

MRS technology inhibits any reflections that can distort the data, especially on shiny components, enabling precise 3D representation while the architecturally superior sensor design captures and transmits data simultaneously and in parallel. The result is unmatched speed and accuracy.

The CX150i™ system offers simple, fast and reliable automated conformal coating inspection using a brand-new UV Strobed Inspection Module (SIM). Designed with an 80 Megapixel sensor, CX150i™ offers white light illumination for component presence/absence inspection and UV illumination for conformal coating inspection. Powered by AI² (Autonomous Image Interpretation) technology, CX150i™ enables faster, simpler and smarter programming. Conformal coating inspection plays a critical role in ensuring consistency and quality conformal coating while reducing visual inspection errors and operator costs.

The SE600™ 3D SPI system delivers ‘true’ volume measurement and world-class usability. Designed with a state-of-the-art dual illumination sensor, it offers the best repeatability and reproducibility – even on the smallest paste deposits. The multi award-winning SPIv5 series software offers full touch screen capability and world-class user experience for easy, flawless inspection. CyberPrint OPTIMIZER™, a unique value-add program, that automatically optimizes your printing process is part of the SE600™ software portfolio.

About CyberOptics Corporation

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required for meeting customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; product introductions and pricing by our competitors; the level of revenue and loss we record in 2014; the success of our 3D technology initiatives; expectations regarding LDI and its impact on our operations; integration risks associated with LDI and other factors set forth in the Company's filings with the Securities and Exchange Commission.
