

High Performance MRS-Enabled Systems to Maximize ROI for Various Applications Demonstrated at APEX

Minneapolis, Minnesota — January 2017 — [CyberOptics® Corporation](#) (NASDAQ: CYBE) today announced plans to exhibit in Booth #2809 at the 2017 [IPC APEX EXPO](#), scheduled to take place Feb. 14-16, 2017 at the San Diego Convention Center in California. The Multi-Reflection Suppression (MRS) enabled SQ3000™ 3D Automated Optical Inspection (AOI) system, deemed best-in-class, will be on display for live demonstrations, along with the MRS-enabled CyberGage 360™ and the QX250i™.

The SQ3000™ 3D AOI system maximizes ROI and line utilization with multi-view 3D sensors that capture and transmit data simultaneously, and in parallel, accelerating 3D inspection speed versus alternate technology. The proprietary MRS technology combined with the highly sophisticated 3D fusing algorithms offers microscopic image quality at production speeds.

The CyberGage360™ presents an unprecedented combination of speed, accuracy and one-button simplicity for non-contact automated 3D scanning inspection. The system dramatically speeds up quality assurance of in-process inspection and/or incoming/outgoing parts inspection; lowers cost of quality and speeds up product time-to-market. Designed for use in general purpose metrology, the CyberGage360 has a range of potential industrial applications from automotive to aerospace to consumer electronics, where high accuracy and high speed throughput are important.

The QX250i™ simultaneous double-sided AOI system offers fast, flexible and high performance inspection for all applications, and is ideally suited for pre-reflow and selective solder inspection. The top and bottom high-resolution Strobed Inspection Modules (SIMs) with enhanced illumination provide a single platform for the inspection and defect review process that shortens the production line and drives approximately 50 percent productivity improvement.

About CyberOptics

CyberOptics Corporation (www.cyberoptics.com) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics' sensors are used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase

its penetration of key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives, including CyberGage360, and other factors set forth in the Company's filings with the Securities and Exchange Commission.
