

CyberOptics Demonstrates New MRS-Enabled 3D AOI, SPI and CMM Systems at APEX

Minneapolis, Minnesota — January 2018 — [CyberOptics® Corporation](http://www.cyberoptics.com) (NASDAQ: CYBE), a leading global developer and manufacturer of high-precision 3D sensing technology solutions, today announced plans to exhibit in Booth #2409 at the 2018 IPC APEX EXPO, scheduled to take place Feb. 27 - March 1, 2018 at the San Diego Convention Center, California. Company representatives will demonstrate the new high-speed SQ3000™ 3D CMM, an extension of the MRS-enabled SQ3000 platform deemed best-in-class and the new MRS-enabled SE3000™ SPI system.

The new SQ3000 3D CMM (Coordinate Measurement) system, powered by Multi-Reflection Suppression (MRS) technology utilizes CyberCMM™, a new comprehensive software suite for coordinate measurement. In a lab or production environment, the MRS-enabled SQ3000 CMM system is extremely fast and highly accurate, with repeatable and reproducible measurements for metrology applications in manufacturing of a wide variety of products such as PCBs, semiconductors and consumer electronics.

CyberCMM™, an extensive suite of CMM tools, provides 100 percent metrology-grade measurement on all critical points much faster than a traditional CMM, including coplanarity, distance, height and datum X, Y, to name a few. A fast and easy setup can be performed as compared to a slow, engineering resource-intensive setup that typically requires multiple adjustments with traditional CMMs.

The new SE3000™ SPI system is the very first SPI system to incorporate the industry-leading MRS sensor technology with a finer resolution for the best accuracy, repeatability and reproducibility – even on the smallest paste deposits. Combined with the award-winning, easy-to-use software, solder paste inspection has reached a new level of precision for the most stringent requirements.

About CyberOptics

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical markets. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; the timing of orders and shipments of our products, particularly our 3D MRS-enabled AOI systems; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the success of CyberGage360; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
