

CyberOptics Debuts CyberGage360 3D Scanning System at APEX

High-precision automated 3D scanning system lowers customers' cost of quality

Minneapolis, MN — March 8, 2016— [CyberOptics® Corporation](#) (NASDAQ: CYBE), a leading global developer and manufacturer of high precision 3D sensing technology solutions, today announced it will debut its much anticipated CyberGage360™, a high-precision automated 3D scanning system at the [IPC APEX EXPO](#), March 15-17, 2016 at the Las Vegas Convention Center, CyberOptics booth #2721.

CyberGage360 greatly facilitates quality assurance of incoming parts and in process inspection of components on the manufacturing floor. Designed for use in general purpose metrology, the CyberGage360 has a range of potential applications including consumer electronics and industrial applications from automotive to aerospace, where high accuracy and high speed throughput are vital.

A highly precise full 360 degree automated 3D scan of high tolerance parts can be generated in less than three minutes. Incorporating CyberOptics' proprietary [3D Multi-Reflection Suppression \(MRS\) technology](#) that inhibits measurement distortions, the automated CyberGage360 brings greater accuracy and scanning speeds to the industrial parts inspection market. With just one click, it enables factory-friendly operation with minimal training by automatically generating an inspection report including a comparison to a CAD model or a 'golden' example.

"We just announced the start of our beta testing last month and already we are seeing interest in this technology that combines high-precision scanning accuracy with one-button ease of use, generating a full scan in just minutes," said Dr. Subodh Kulkarni, President and CEO of CyberOptics. "By integrating our proprietary 3D MRS technology into the CyberGage360, customers can effectively lower their cost of quality and reduce time-to-market."

At APEX, CyberOptics will also demonstrate the SQ3000 3D Automated Optical Inspection (AOI) system that incorporates the same MRS technology platform that enables unmatched speed and accuracy.

For more information about the entire line of CyberOptics solutions, please visit the company's website at www.cyberoptics.com. The CyberGage360 system will be marketed by CyberOptics and Laser Design, a CyberOptics' company.

About CyberOptics

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

About Laser Design, Inc.

Laser Design, Inc., a CyberOptics (NASDAQ: CYBE) subsidiary, is a premiere provider of ultra-precise 3D scanning systems and 3D measurement services. Laser Design has helped customers successfully complete their most complex inspection, analysis, and reverse engineering projects for more than 30 years. Its experienced metrologists and engineers know that today more than ever, speed and quality give manufacturers the competitive advantage.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives and other factors set forth in the Company's filings with the Securities and Exchange Commission.
