

CyberOptics to Exhibit High Speed, High Accuracy 3D SPI and 3D AOI Systems at productronica India

Minneapolis, Minnesota — August 2015 — [CyberOptics® Corporation](http://www.cyberoptics.com) (NASDAQ: CYBE) today announced that it will exhibit with its representative, Maxim SMT in Booth #1135 at productronica India, scheduled to take place Sept. 9-11, 2015 at the Pragati Maiden in New Delhi. Company representatives will showcase CyberOptics' newly launched SQ3000™ 3D AOI system and SE600™ 3D SPI system.

The SQ3000™ 3D Automated Optical Inspection (AOI) system maximizes ROI and line utilization with multi-view 3D sensors that capture and transmit data simultaneously, and in parallel, accelerating 3D inspection speed versus alternate technology. The proprietary Multi-Reflection Suppression (MRS) technology combined with the highly sophisticated 3D fusing algorithms offers microscopic image quality at production speeds. An easy-to-use, intuitive interface with touch control facilitates minimal training and

operator interaction.

The SE600™ 3D SPI system delivers 'true' volume measurement and world-class usability. Designed with a state-of-the-art dual illumination sensor, it offers the best repeatability and reproducibility – even on the smallest paste deposits. The award-winning SPIv5 series software offers full touch screen capability and world-class user experience for easy, flawless inspection.

All CyberOptics' AOI systems are powered by AI² (Autonomous Image Interpretation), giving you the power to inspect 'ANYTHING' without having to anticipate defects or predefine variance. AI² offers precise discrimination even with excessive variance and delivers accurate results with just one example. All of this means the lowest false calls, zero escapes and minimal tuning.

About CyberOptics

CyberOptics Corporation (www.cyberoptics.com) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics' sensors are used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore

involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; expectations regarding LDI and its impact on our operations; integration risks associated with LDI and other factors set forth in the Company's filings with the Securities and Exchange Commission.
