

Laser Design Demonstrates One-Button Automated CyberGage®360 3D Scanning and Inspection System at TCT

Generates a highly accurate full 360 degree 3D scan and inspection report in seconds

Minneapolis, MN —September 12, 2017— [Laser Design, Inc.](#), a subsidiary of CyberOptics (NASDAQ: CYBE), and premier provider of ultra-precise 3D scanning systems and services, will demonstrate the automated CyberGage360 3D scanning and inspection system at the 22nd TCT show in Birmingham, UK, September 26-28 in booth A49. The TCT show is part of the TCT group whose mission is to accelerate the adoption of 3D technologies for design, development and manufacture across all industry sectors.

“CyberGage360 brings an unprecedented combination of speed, accuracy and one-button simplicity for non-contact 3D scanning inspection,” said C. Martin Schuster, President and CEO of Laser Design. “Our customers appreciate the significant value of a streamlined process that takes seconds rather than hours or days.”

CyberGage360 greatly facilitates Quality Assurance by allowing anyone to be an inspector of in-process and incoming/outgoing parts on the manufacturing floor or in the metrology lab, lowering customers’ cost of quality and speeding products to market. With little training, anyone can check parts for any deviation from CAD or check critical features. Designed for use in general purpose metrology, the CyberGage360 has a range of potential applications for consumer electronics, medical, automotive, aerospace and other verticals, where high accuracy and high speed throughput are vital.

Incorporating CyberOptics’ proprietary 3D Multi-Reflection Suppression (MRS) technology, the automated CyberGage360 brings significantly greater accuracy and scanning speeds to the industrial parts inspection and reverse engineering markets.

About Laser Design, Inc.

Laser Design, Inc., a subsidiary of CyberOptics (NASDAQ: CYBE), is the premiere provider of ultra-precise 3D scanning systems and 3D measurement services. Laser Design has helped customers successfully complete their most complex inspection, analysis, and reverse engineering projects for more than 30 years. Its experienced metrologists and engineers know that today more than ever, accuracy, speed and automation give manufacturers the competitive advantage.

About CyberOptics

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical markets. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; the timing of orders and shipments of our products, particularly our 3D MRS-enabled AOI systems; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the success of CyberGage360; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
