

Laser Design Demonstrates the CyberGage360 3D Scanning System at RAPID 2016

The World's First Microwave Oven-like 3D Scanning Inspection System

Minneapolis, MN —April 12, 2016— [Laser Design, Inc.](#), a fully-owned subsidiary of CyberOptics (NASDAQ: CYBE), and premier provider of ultra-precise 3D scanning systems and services, today announced it will debut its much anticipated CyberGage360™, a metrology-grade, ultra fast, one-button automated 3D scanning/inspection system at [RAPID 2016](#), May 16-19, 2016 at the Orange County Convention Center, Orlando. Laser Design will be demonstrating the latest in 3D scanning in Booth #315.

With one-button simplicity, a highly-precise complete shape of part 360 degree scan of complex parts can be generated in less than three minutes. This simplicity also enables factory-friendly operation with minimal training. Incorporating CyberOptics' proprietary 3D Multi-Reflection Suppression (MRS) technology, the automated CyberGage360 brings significantly greater accuracy and scanning speeds to the industrial parts inspection and reverse engineering markets.

CyberGage360 greatly facilitates Quality Assurance by allowing anyone to be an inspector of either incoming parts or in process parts on the manufacturing floor, lowering customers' cost of quality and speeding products to market. With little training, anyone can check parts for any deviation from CAD or check critical features with one button simplicity. Designed for use in general purpose metrology, the CyberGage360 has a range of potential applications for consumer electronics, automotive, aerospace and other verticals, where high accuracy and high speed throughput are vital.

"3D scanning of complex parts is now as easy as preparing a cup of tea in a microwave. You simply open the door, put your part in, press a button and you have a highly-precise 3D scan with a full 3D inspection report in a matter of two to three minutes," said C. Martin Schuster, President and CEO of Laser Design. "We have integrated CyberOptics' proprietary 3D MRS scanning technology into this system in order to generate highly accurate 360 degree scans. The combination of simplicity, speed and accuracy is unprecedented in the industrial 3D scanning technology markets."

In addition to a series of products, the company also offers 3D Services which include 3D laser scanning services for reverse engineering, quality inspection and to capture internal and external geometry. For more information about the entire line of Laser Design solutions please visit the company's website at www.laserdesign.com.

About Laser Design, Inc.

Laser Design, Inc., a CyberOptics (NASDAQ: CYBE) company, is the premiere provider of ultra-precise 3D scanning systems and 3D measurement services. Laser Design has helped customers successfully complete their most complex inspection, analysis, and reverse engineering projects for more than 30 years. Its experienced metrologists and engineers know that today more than ever, accuracy, speed and automation give manufacturers the competitive advantage.

About CyberOptics

CyberOptics Corporation (NASDAQ: CYBE) is a leading global developer and manufacturer of high precision sensing technology solutions. CyberOptics sensors are being used in general purpose metrology and 3D scanning, surface mount technology (SMT) and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of its key vertical segments. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: market conditions in the global SMT and semiconductor capital equipment industries; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives and other factors set forth in the Company's filings with the Securities and Exchange Commission.
